DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, 30-36 drawn to a pressure sensing structure, classified in class 73, subclass 700.
- II. Claims 22-29, drawn to a method of making a pressure sensing structure, classified in class 29, subclass 593.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed could be used to manufacture other semi-conductor/ I.C. structures.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

2. Claims 1-21 and 30-36 are generic to a plurality of disclosed patentably distinct species comprising :

Species I (claims 1-9,21 and 30-36) comprises a pressure sensing structure having a plurality of deformable plates

Species II (claims 10-20) comprises a pressure sensing structure having a plurality of conducting plates and fingers

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
